

REVOLUTIONARY LASER 1565NM FOR  
HAIR REGROWTH and SKIN CARE

# 1565nm Non-Ablative Fractional Laser

It enables you to attract more patients and expand your business for a rapid return on investment.

As one of the most versatile systems in the market, it truly is a system for each and every one. Treat any gender, any age and any skin type with outstanding results.

# HAIR LOSS AS A GLOBAL PROBLEM!

**~60%**

of men will have to deal with hair loss by age 50.

**~50%**

of women will experience hair loss in their lifetime.

**HAIR LOSS IS ESPECIALLY FREQUENT IN**

**40+** Women over 40.

Women who wear their hair in tight ponytails.

Women who have recently had children.

## HAIR GROW

It is a revolutionary non-ablative fractional laser system using hair stimulation technology, providing effective, safe, and simple treatment for women and men.

### **CHINA FIRST**

First fractional laser for hair loss treatment.

### **PROVEN RESULTS**

Clinical studies show increase in hair count and improvement in scalp hair appearance.

### **NATURAL AND SAFE - NO CHEMICALS**

Leveraging the body's own processes for hair stimulation without chemicals.

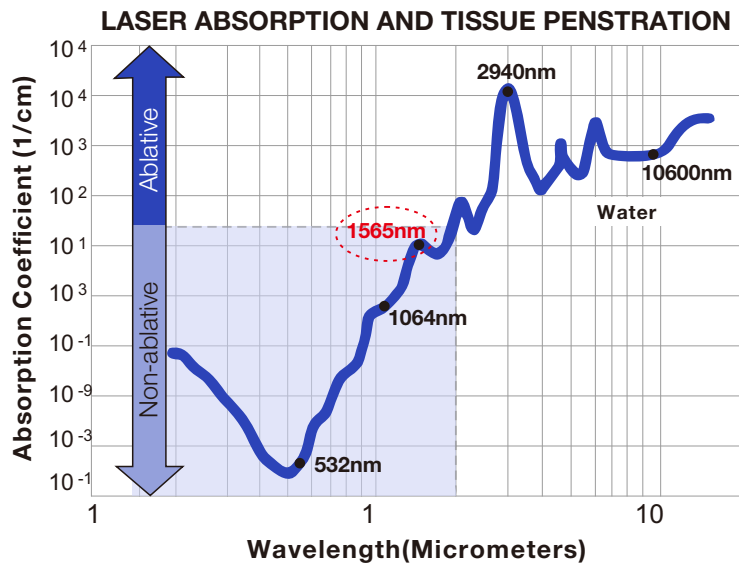

### **SIMPLE, 30 MINS PROCEDURE**

Simple to use, easy to learn, quick to treat. 3-6 treatment sessions to achieve results.

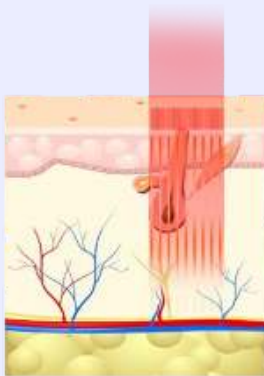

# Technology Behind

## — 1565nm Non-Ablative Fractional Laser

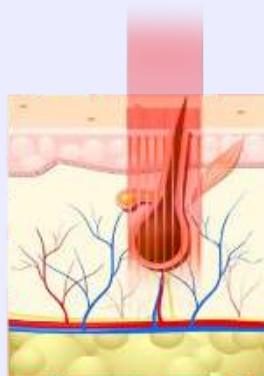

### How it works:

- The 1565nm fractional laser emits energy to form a 110µm non-ablative aperture, using high-precision micro-laser beams to create small, deep micro-channels in the epidermis and dermal collagen tissue. Studies suggest that 1565nm lasers can be effective in treating alopecia areata (an autoimmune condition causing hair loss) by increasing blood flow to the scalp and stimulating hair growth factors.
- The 1565nm laser is a versatile tool in dermatology, offering effective hair loss treatment and skin rejuvenation with minimal downtime and side effects. Its fractional approach and ability to stimulate collagen production make it a valuable option for alopecia areata and various skin concerns.

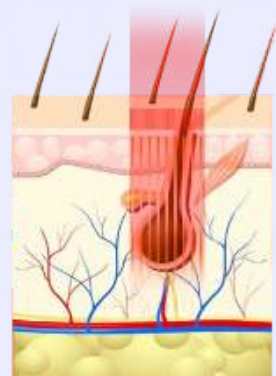

#### EARLY USE

Hair loss occurs due to blood vessel contraction, limiting nutrition to hair follicles.

#### MEDIUM TERM USE

1565nm Laser therapy boosts blood circulation, delivering nutrients to hair cells and promoting follicle growth.

#### POST USE

Laser boosts hair follicle growth by stimulating mitochondria for more ATP.

# SKIN RESURFACING

1565nm lasers are used to improve skin texture, reduce wrinkles, and minimize the appearance of scars (including stretch marks and acne scars). The laser stimulates collagen production, leading to skin remodeling and a smoother surface.
